

How to set up devices

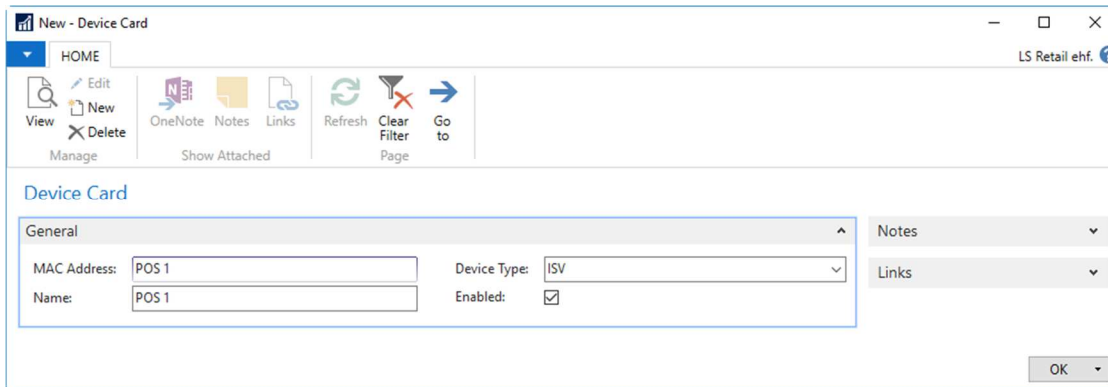

Devices that are supposed to be set up as ISV devices (and licensed as such) should be set up in the system table **User**, as a Device only user, otherwise they obtain a full user to connect.

1 Device Card Setup

Start by setting up a Device Card for each Device you have in the license.

Setup of Devices should be similar to:

1. In Nav: #Company name#/Departments/Administration/IT Administration/General/Devices
2. Mac Address: Cannot be empty, but the actual Mac address is not needed. Instead number them with a unique number, etc. POS1,POS2,,,,,POS##
3. Device Type: ISV
4. Enabled: Yes

2 User Setup

Each user that should be logged in as a Device user should be set up with **License Type: Device Only User**

1. In NAV: #Company name#/Departments/Administration/IT Administration/General/Users
2. License type: Device Only User
3. State: Enabled
